STANDARD SLOPE PROTECTION UNDER BRIDGES

NOTES:

The toe wall shall be placed before concrete is placed on the

All inside panels shall be 5'-6" square. All outside panels shall be adjustable from 5'-0" minimum to 8'-0" maximum.

All transverse joints shall be $\frac{1}{2}$ " deep grooved joints sealed with concrete joint sealer. All longitudinal joints shall be construction joints with $\frac{1}{2}$ " deep grooves sealed with concrete joint sealer. All cracks that may have developed before the project has been accepted shall also be sealed with concrete joint sealer. An elastomeric joint sealant which meets ASTM C-920, CI 25, can be used in lieu of the sealants allowed in 826.02 of the ND Standard Specifications.

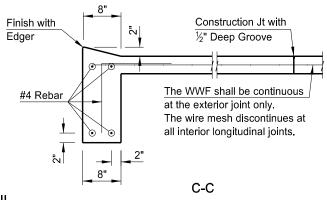

Wherever parts of a structure, such as piers, etc. are contacted by the slope protection, preformed expansion joint filler shall be installed between the contact areas as shown.

Shear keys shall be placed in every panel on the slope, as

The welded wire fabric (WWF) shall be supplied in sheets. When it is necessary to make the WWF continuous, a lap splice at least 8" long shall be used.

Several shorter bars may be substituted for the continuous Bar 2 x 3/8. If the substitution is made, the space from the end of the bar to the first hole shall not be more than 6 inches.

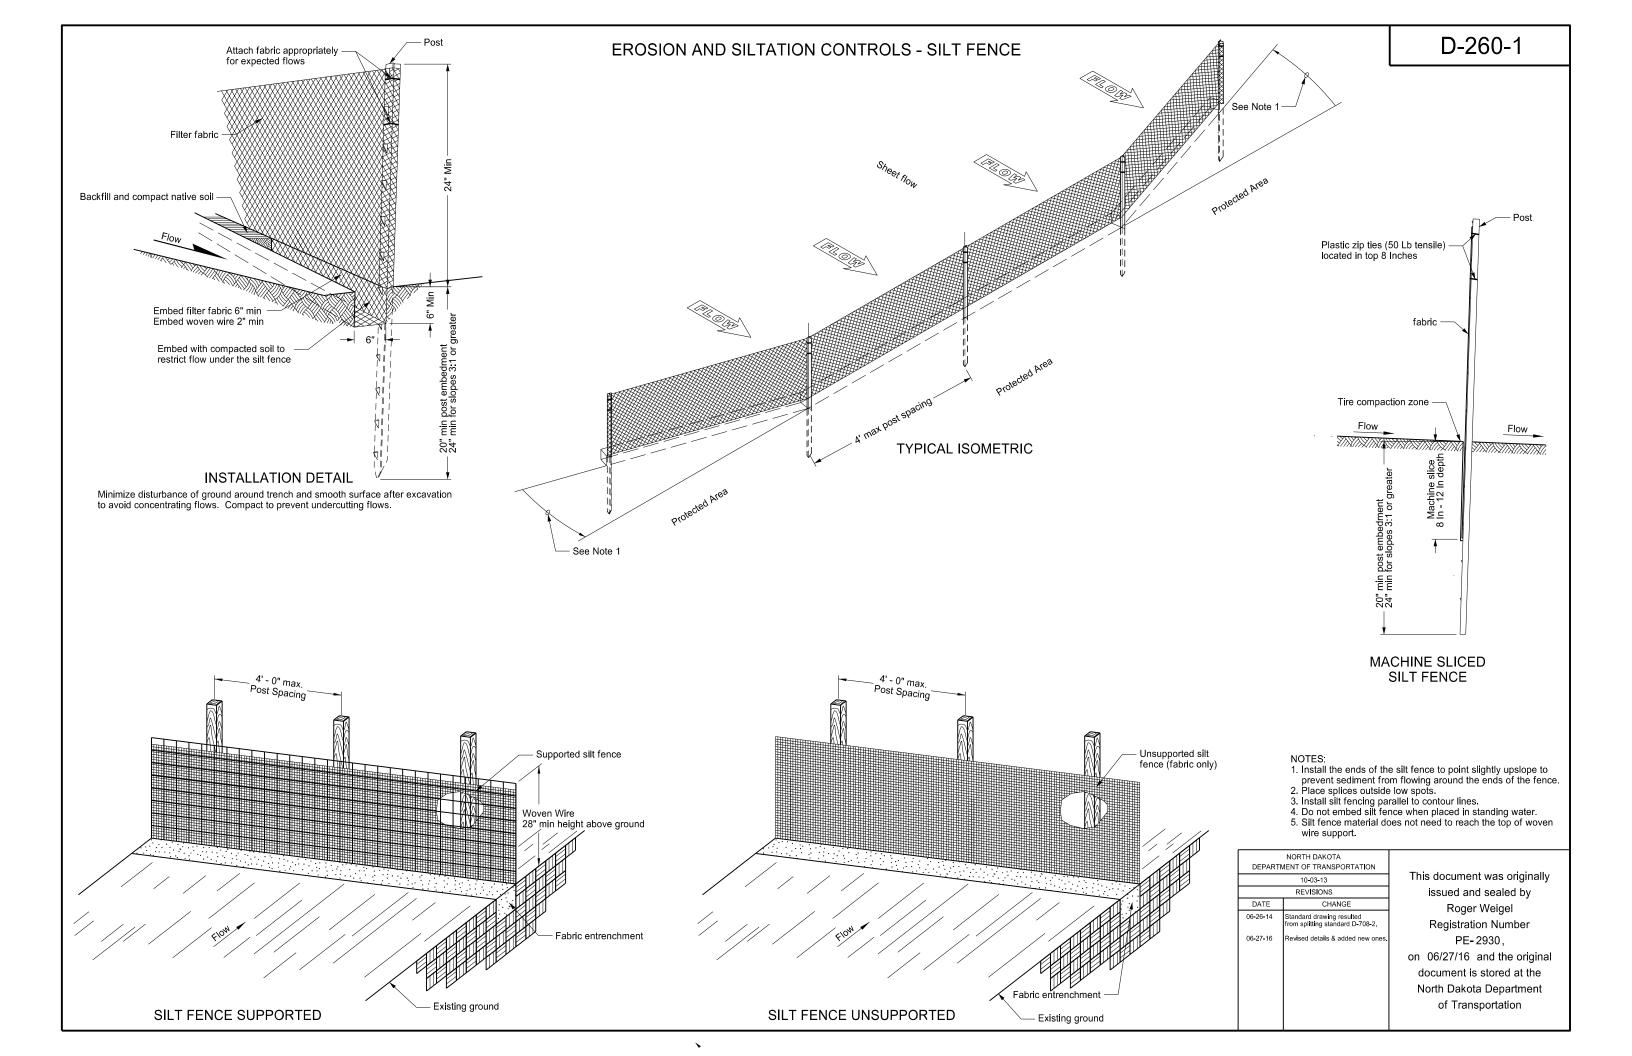

The bolts to hold the neoprene gland in place shall be installed into the abutment by a mechanical or chemically bonded

28" --

200, 400, 700 and 1400 lb

Outer Containers

Typical Assembly

Cones

Typical Module

Construction Detail

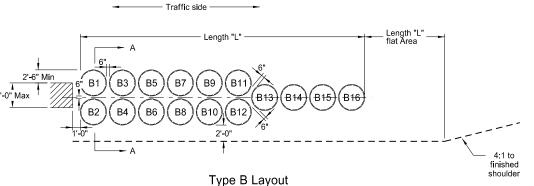

Left Side Right Side Both Sides Traffic Traffic Ťraffic

Reflective Sheet Detail

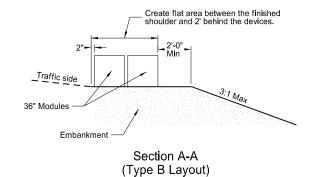

Apply Type IV reflective sheeting (as specified in the NDDOT Standard Specifications) directly to the outer container of the last attenuation device facing traffic, following the details above. Or apply the sheet to a metallic sheet and attach it to the container with approved fasteners.

(A) Use 3" orange sheeting for temporary installations, and 3" yellow sheeting for permanent installations.

Fill Chart								
	-	Module Weights (LBS)						
	200 400 700 1400 2100							
Distance from top edge	8½"	5"	4"	3"	0"			

Angle attenuation devices 10 degrees towards traffic when placed at piers offset from roadway.

Notes:

- A) Use modules manufactured from frangible polyethylene material which shatters upon impact.
 B) Fill modules with class 43 aggregate meeting NDDOT Standard Specifications aggregate requirements. Use fill with a unit weight of at least 100 pounds per cubic foot. Use fill with a moisture content of 2% or less when left over winter.

- Provide modules in two sizes containing volumes of either 2, 4, 7, 14, or 21 cubic feet minimum.

 A) Provide three components for 2, 4, or 7 cubic foot module containers:

- A 14 C.F., yellow outer container.
 A black lid securely locking over the top lip of the container.
- 3) A variable cone-shaped supporting insert capable of supporting 200, 400, or 700 pounds of sand mass to allow for three sizes of modules. Place cone inserts inside the 14 cubic foot container.
- B) Provide two components for the 14 cubic foot module container
- 1) A 14 C.F., yellow outer container.
 2) A black lid securely locking over the top lip of the container.
 C) Provide two components for the 21 cubic foot module container.
 1) A 36" height X 36" width yellow outer container.
- 2) A black lid which locks securely over the top of the container.
- 3. For temporary installations use Energite or Fitch attenuation barrels manufactured by Energy Absorption Systems of Chicago, IL, TrafFix barrels manufactured by TrafFix Devices, Inc. of San Clemente, CA, or approved equal modules. As an option, place attenuation devices on 3½" maximum thickness pallets to facilitate maintenance.
- 4. For permanent installations use Barrel Attenuation Device consisting of one-piece outer sand container modules with separate detachable lid. Energite attenuation barrels manufactured by Energy Absorption Systems of Chicago, IL, TrafFix barrels manufactured by TrafFix Devices, Inc. of San Clemente, CA, or approved equal meet these requirements.
- 5. The Typical Module Construction Detail and Type B Layout are based on the Energite Crash Cushion manufactured by Energy Absorption. Provide any required layouts and details from other sand filled attenuation module manufacturers which differ from those shown here.

U-Channel Post

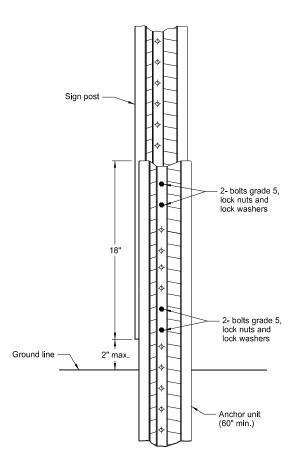

Breakaway U-Channel Detail Alternate A

Install a maximum of 2 posts within 7'.

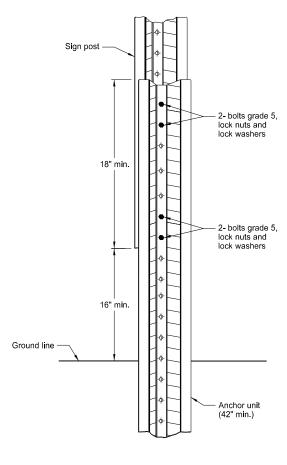

Retainer Strap Detail

Breakaway U-Channel Splice Detail Alternate B (2.5 and 3 lb/ft)

Install a maximum of 3 posts within 7'.

Breakaway U-Channel Splice Detail Alternate C (2.5 and 3 lb/ft) Install a maximum of 3 posts within 7'.

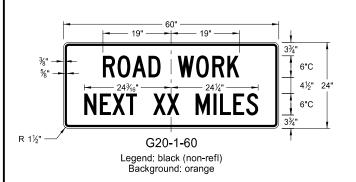

Alternate A Steps of Installation:

- a) Drive anchor unit to within 12" of ground level.
- b) Establish proper assembly by lining up bottom hole of retainer strap with 6th hole from the top of the anchor unit. c) Assemble strap to back of anchor unit using $\frac{9}{16}$ "x2" bolt, lock washer and nut.
- d) Rotate strap 90° to left.
- a) Drive anchor unit to 4" above ground.b) Rotate strap to vertical position.
- a) Place 3/6"x2" bolt, lock washer and nut in bottom of sign post to facilitate alignment of sign post with proper hole in anchor unit. b) Alternately tighten two connector bolts.
- 4. Complete assembly by tightening $\frac{5}{16}$ "x2" bolt (this fastens sign post to retainer strap).
- 5. Properly nest base post, strap, and sign post. Proper nesting occurs when all flat surfaces of the base post, strap, and sign post at the bolts have full contact across the entire width.

	REVISIONS		
DATE	CHANGE		
		_	

This document was originally issued and sealed by Roger Weigel, Registration Number PE-2930, on 5/31/18 and the original document is stored at the North Dakota Department of Transportation

NOTES:

1. Sign Supports: Galvanize or paint supports. Minimum post sizes are 2.5 lb/ft u-channel or 2" x 2" x 12 gauge steel perforated tube, except where noted. When installing signs on u-channel, minimum post size for assemblies containing a secondary sign is 3.0 lb/ft. Post sizes based on a wind speed

Place signs over 50 square feet on 2½" x 2½" perforated tube supports as a minimum.

Do not attach guy wires to sign supports. Attach wind beams behind sign panels when used with u-posts.

- 2. Sign Panels: Provide sign panels made of 0.100" aluminum, $\frac{1}{2}$ " plywood, or other approved material, except where noted. Punch all holes round for \(^3\)\(^1\) bolts.
- 3. Alternate Messages: Install and remove alternate message signs on reflectorized plate (without borders) as required. (i.e. "Left" and "Right" message on lane closure sign)
- Route Marker Auxiliary Signs: Provide route marker auxiliary signs, such as the cardinal direction and directional arrows, with a background and legend that match the route marker they are

Interstate - white legend on blue background Interstate Business Loop - white legend on green background US and State - black legend on white background County - yellow legend on blue background

5. Vertical Clearance: Install signs with a vertical clearance of 5'-0" (see TYPICAL SECTION.) In areas where parking or pedestrian movements are likely or the view of the sign may be obstructed, install signs with a vertical clearance of 7'-0" from the top of the curb or from the near edge of the driving lane in

The vertical clearance to secondary signs is 1'-0" less than the vertical clearance stated above.

Provide a minimum clearance of 7'-0" from the ground at the post for signs with an area exceeding 50 square feet.

6. Portable Signs: Provide portable signs that meet the vertical clearance stated above when it is necessary to place signs within the pavement surface.

Use of low-mounting height (minimum 12" vertical clearance) portable signs for 5 days or less, is allowed as long as the view of the sign is not obstructed. Time delays caused by unforseen circumstances, such as equipment breakdown, rain, subgrade failures, etc., will not accrue towards the 5 day period. Use of R9-8 through R9-11a series, W1-6 through W1-8 series, M4-10, and E5-1 is allowed for longer than 5 days.

Restrict signs mounted on portable sign supports shown in the LOW-MOUNTING HEIGHT and HIGH-MOUNTING HEIGHT details to a maximum surface area of 16 square feet.

MINIMUM BALLAST (For each side of sign support base)

Sign Panel Mounting Height (ft)	Number of 25 lb sandbags for 4' x 4' sign panel
1'	6
5'	8
7'	10

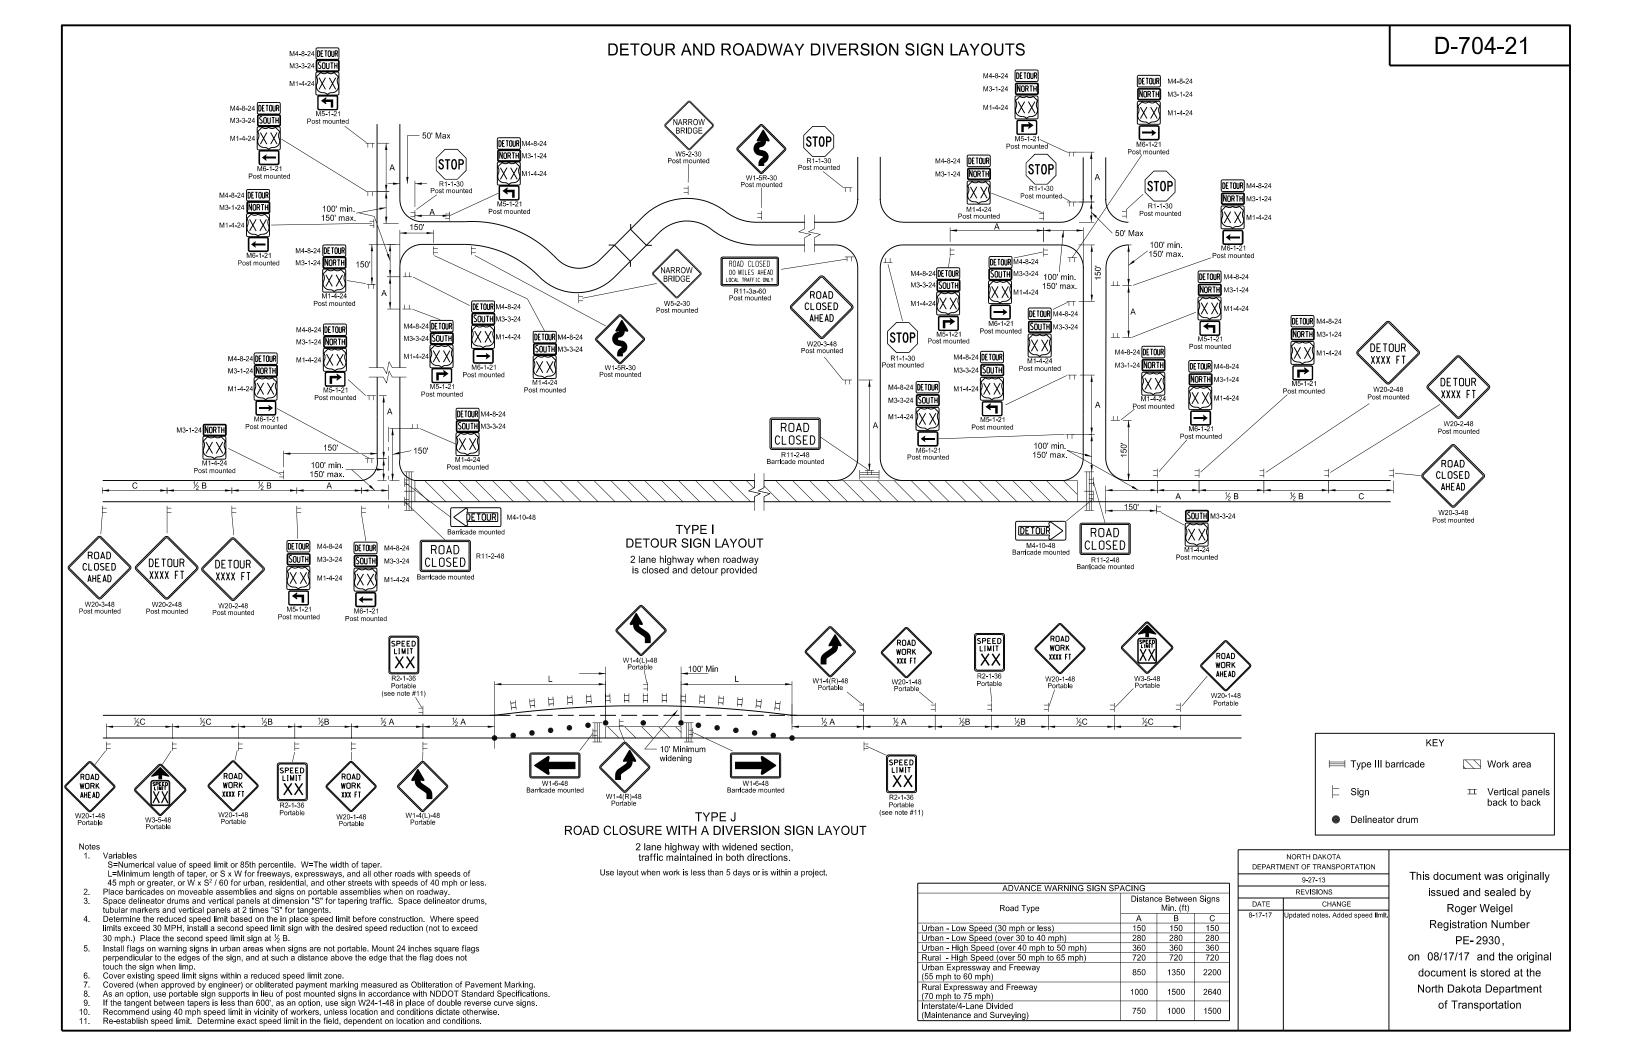

Note: The number of sandbags are based on a wind speed of 55 MPH. Place sandbags at or near the ends of skids.

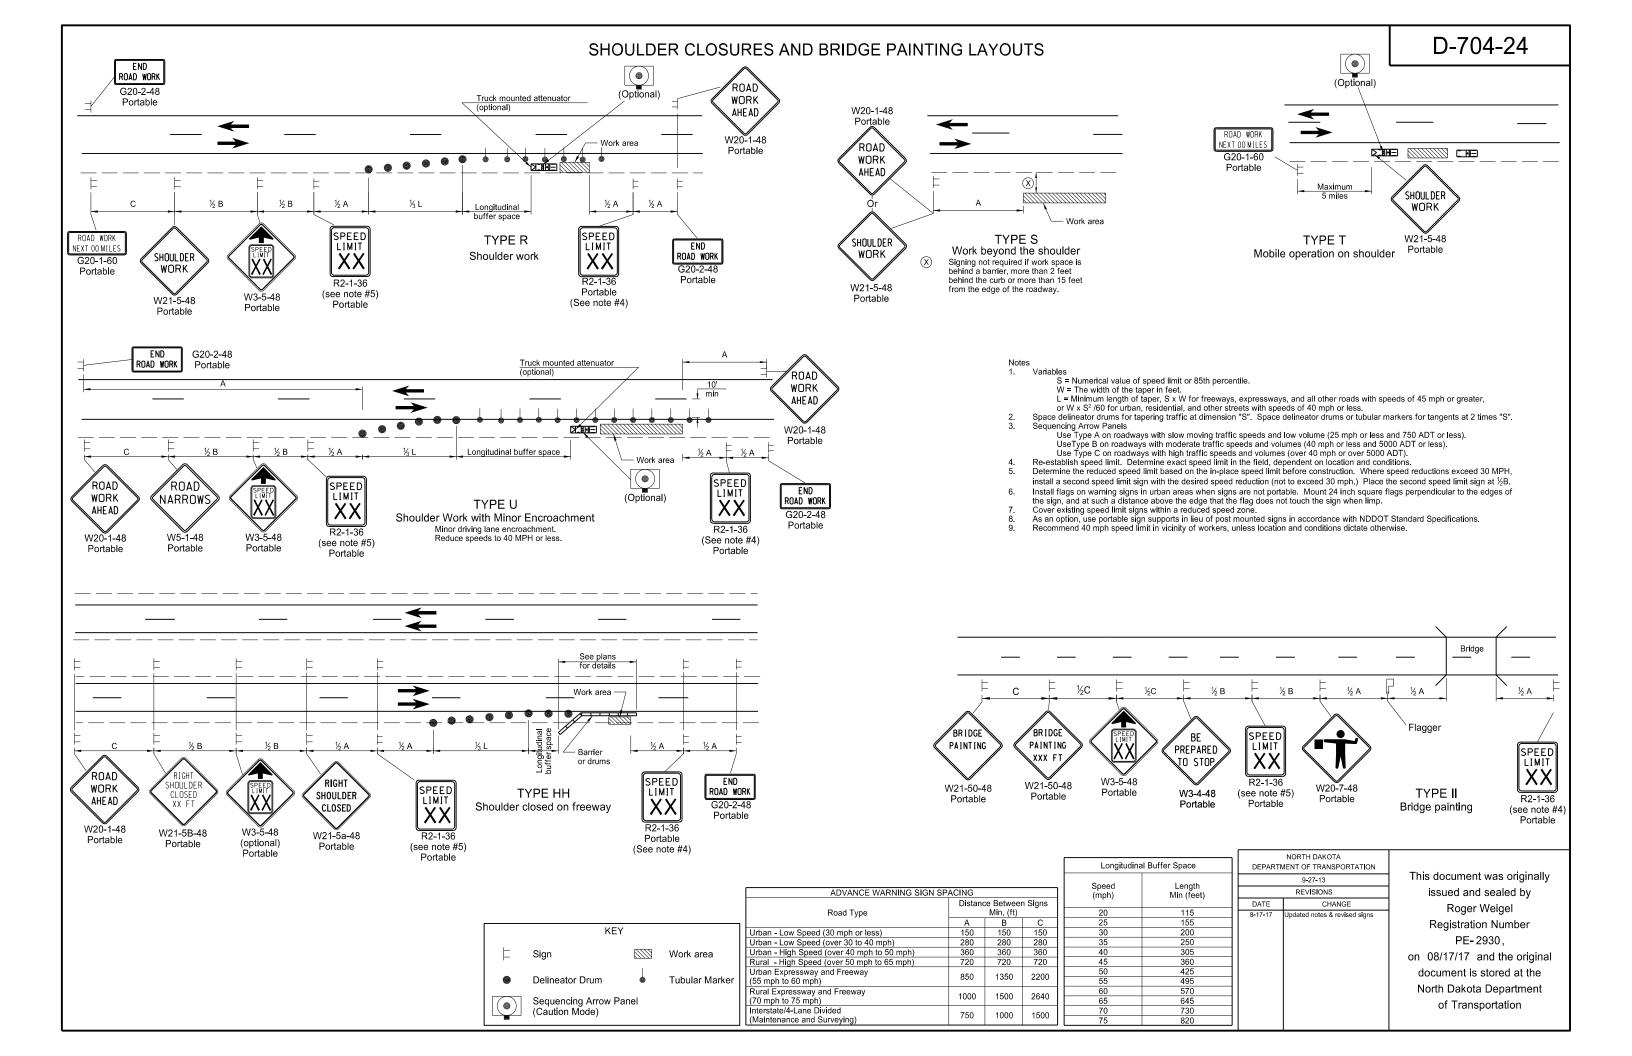

NORTH DAKOTA		
DEPARTI	MENT OF TRANSPORTATION	
10-4-13		
	REVISIONS	
DATE	CHANGE	
11-14-13 9-27-17	Revised Note 6. Updated to active voice	

This document was originally issued and sealed by Roger Weigel. Registration Number PE-2930, on 9/27/2017 and the original document is stored at the

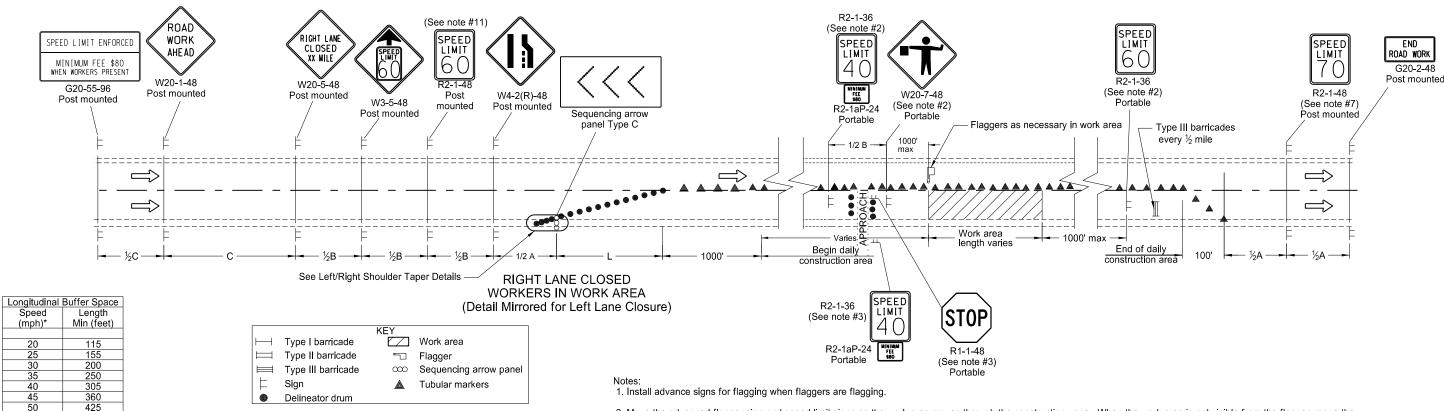

North Dakota Department

of Transportation

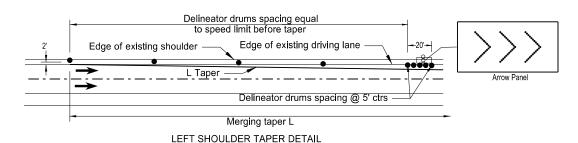

SIGN LAYOUT FOR ONE LANE CLOSURE

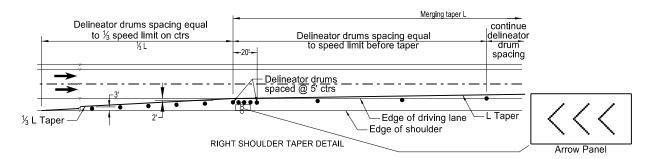

*Posted speed, off-peak 85th percentile speed prior to work starting, or the anticipated operating speed in mph.

495

820

- 2. Move the advanced flagger sign and speed limit signs as the work area moves through the construction zone. When the work area is not visible from the flagger, move the flagger station so the work area is visible. Place the 40 mph speed limit sign at 1/2A in advance of the flagger sign and move the 60 mph speed limit sign. Cover or remove the 40 mph speed limit and the Minimum Fee \$80 signs upon completion of the work day or when workers are not present. Determine the exact speed limit in the field,
- 3. Approaches: When the work area encompasses an approach, install a 40 mph speed limit sign to control the approach. Cover the existing stop sign and install a new portable stop sign when the approach is on the side of the lane closure. Remove the approach speed limit sign once the main line 40 mph speed zone is moved past the approach.
- 4. Variables:

S=Numerical value of speed limit or 85th percentile

W=The width of taper.

- L=Minimum length of taper, or SxW for freeways, expressways, and all other roads with speeds of 45 mph or greater, or (WxSxS)/60 for urban, residential, and other streets with speeds of 40 mph or less.
- 5. Space delineator drums for tapering traffic at the dimension "S". Space tubular markers used for tangents at 2 times dimension "S".
- 6. Place sequencing arrow panels at the beginning of the taper when possible. Where shoulder width does not provide sufficient room, move the panel closer to the work area and place on the roadway surface

Use Type A on roadways with slow moving traffic speeds and low volume (25 mph or less and 750 ADT or less).

Use Type B on roadways with moderate traffic speeds and volumes (40 mph or less and 5000 ADT or less).

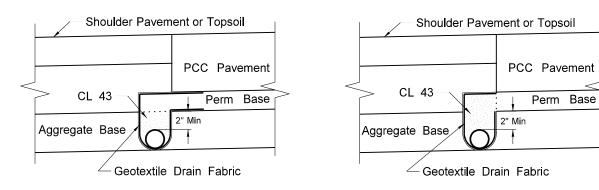

- Use Type C on roadways with high traffic speeds and volumes (over 40 mph or over 5000 ADT).
- 7. Re-establish the speed limit. Determine the exact speed limit in the field, dependent on location and conditions.
- 8. Cover existing speed limit signs within a reduced speed zone.
- 9. Install flags on warning signs in urban areas when signs are not portable. Mount 24 inch square flags perpendicular to the edges of the diamond sign, and at such a distance above the edge that the flag does not touch the sign when limp.
- 10. Determine the reduced speed limit dependent on the in place speed limit before construction. Where speed limits are to be reduced more than 30 mph, install a second speed limit sign with the desired speed reduction (not to exceed 30 mph.) Place the second speed limit sign at 1/2B.
- 11. As an option use portable sign supports in lieu of post mounted signs in accordance with NDDOT Standard Specifications.
- 12. Sign G20-55-96 is not required if this standard is part of other traffic control layouts or the work is less than 15 days.

Option #1: Trench before permeable base is placed Option #2: Trench after permeable base is placed TRENCH WRAP DETAILS

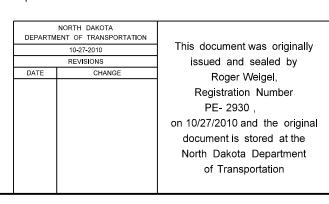

SUPERELEVATED CURVES: The edgedrain, outlets, and headwalls shall be omitted from the high side of superelevated curves.

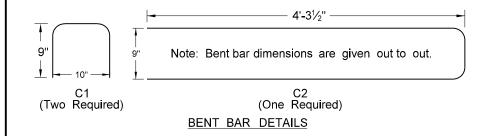

RODENT SCREEN: The rodent screen shall be fabricated from flattened expanded metal with screen openings of approximately 0.25 square inches. The screen shall be 16 ga metal, hot dip galvanized after fabrication.

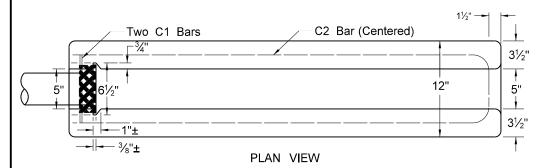

REINFORCING BARS: Reinforcing bars shall be No. 4 deformed steel bars.

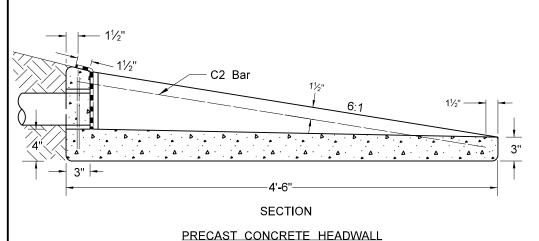

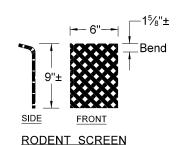

Section A-A shows edgedrain location for median concrete shoulder installations on Interstate highways. For installations where asphalt shoulders will be constructed, or the outside shoulder is to be concrete, the edgedrain is to be trenched adjacent to the roadway concrete pavement, and will be located beneath the shoulder pavement.

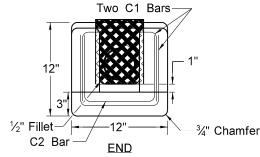

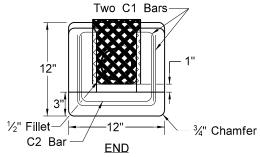

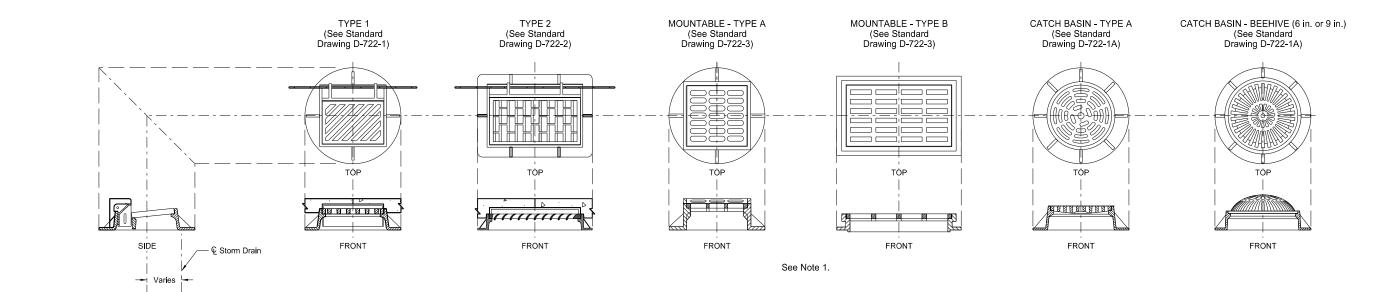

Dimensions are approximate to allow bend and a snug fit in headwall slot

-------------------------------------	---

NOTES:

- 1. For inlet casting details, see Standard Drawings D-722-1, D-722-21A, D-722-2, and D-722-3. Other castings, similar in dimension, may be used provided the casting meets the requirements set forth in the referenced Standard Drawings. The grate style shall be as specified on the plans and included in the price bid for "Inlet Special (casting type & riser size)".
- 2. Metal used in the manufacture of castings shall conform to AASHTO M-105, Class 35B.
- The Class of concrete, aggregate size, and methods of construction for the manhole riser, cover, and base shall be as detailed in Standard Drawing D-722-5.
- See Standard Drawing D-722-5 for manhole riser, cover, and base details, dimensions, and reinforcement requirements.
- 5. The distance between the $\mathbb Q$ of the cover opening and the $\mathbb Q$ of the storm drain shall be noted on the Plan & Profile sheets.
- Manhole steps, if noted on the Plan and Profile sheets, shall be constructed per Standard Drawing D-722-5.
- 7. On projects with P.C.C pavement, all risers shall be constructed 4 to 5 inches below final elevation and adjusted to final elevation after paving. Adjustments may be made with adjusting rings or cast-in-place concrete. All costs for this adjustment shall be included in the price bid for "Inlet Special, (casting type & riser size)".

PERFORATED TUBE ASSEMBLY DETAILS

Note

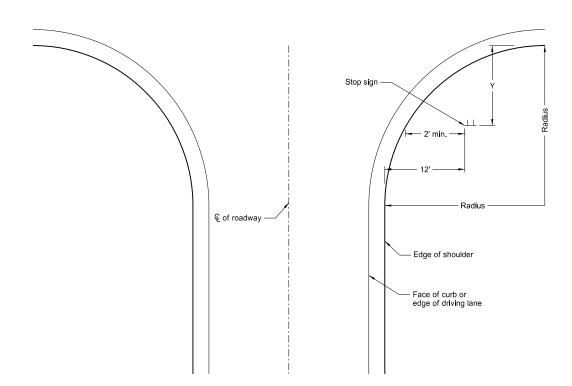

- Curbed Roadways: The clearance from the face of the curb should be 3' except where right of way or sidewalk width is limited, a minimum clearance of 2' shall be provided. The horizontal clearance may need to be increased to maintain a minimum sidewalk clear width of 4' from the sign support, not including any attached curb.
- Minimum vertical clearance: Signs installed at the side of the road in rural districts shall be at least 5' measured from the bottom of the sign to the edge of the driving lane or auxiliary lane. Where parking or pedestrian movements occur, the clearance to the bottom of the sign shall be at least 7'.

Signs on expressways shall be installed with a minimum height of 7'.

Adopt-a-highway signs installed on Freeways shall be at least 7' above the edge of the driving lane.

The vertical clearance shall have a maximum height of 6" above the vertical clearance specified above.

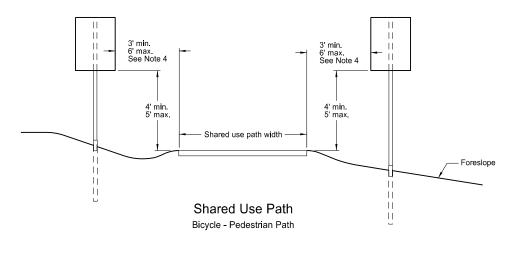

- 3. Offset signs: Where signs are placed at least 30 feet or more from the edge of the traveled way, the height to the bottom of such sign shall be 5' above the edge of the driving lane.
- The clearance from edge of shared use path to edge of sign should be 3' except where width is limited, a minimum clearance of 2' shall be provided.

Mounting Details Perforated Tube

The 2 $\frac{3}{16}$ " size 10 gauge is shown as 2.19" size on the plans; The $\frac{2}{2}$ " size is shown as 2.51" size on the plans.

D-754-24

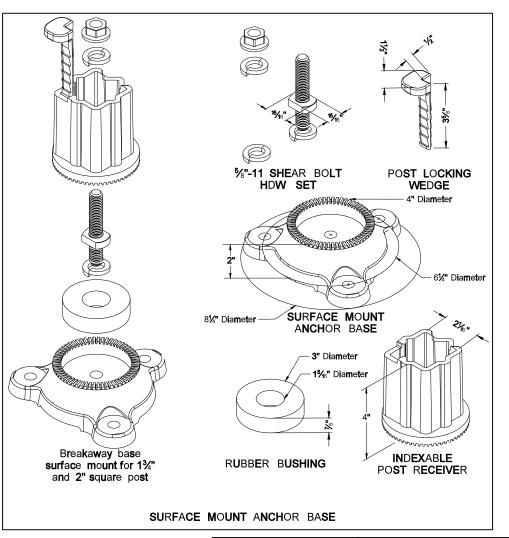

NOTE:

- 4" Vertical clearance of anchor or breakaway base.
 The 4" x 60" measurement shall be made above and below post location and also back and ahead of post.
 Anchor material shall be 7 guage H.R.P.O. Commmercial quality ASTM A569 and 3" x 3" x 7" guage ASTM A500 grade B. Anchor shall have a yield strength 43.9 KSI and tensile strength of 59.3 KSI. Anchor shall be hot dipped galvanized per ASTM A123/153. All tolerances on early rule and since the strength of the on anchor unit and slip base bottom assembly are +/- 0.005" unless ortherwise noted.
- +/- 0.000" unless ormerwise noted.

 When used in concrete sidewalk, anchor shall be the same concept without the wings

 Four post signs shall have over 8' between the first and fourth posts.

 Installation procedures as per manufacturers
- Concrete fasteners for surface mount breakaway base shall be a minimum ½" diameter x 4" grade 8.

ANCHOR UNIT AND POST ASSEMBLY

3/8" Dia. bolts with washer and lock washer or rivets Anchor plate shall be a minimum of 10 gauge material and galvanized same as post

(2 post installation)

Properties of Telescoping Perforated Tubes Size 1½ x 1½ 0.105 12 1.702 0.129 0.380 0.172 2 x 2 0.105 12 2.416 0.372 0.590 0.372 2½ x 2½ 0.105 12 2.773 0.561 0.695 0.499 $2\frac{3}{16}$ x $2\frac{3}{16}$ 0.135 10 3.432 0.605 0.841 0.590

The $2\frac{3}{16}$ " size 10 gauge is shown as 2.19" size on the plans. The $2\frac{1}{2}$ " size is shown as 2.51" size on the plans.

- 1. Horizontal stringers In lieu of perforated tubes, the contractor may substitute z bar stringers. The z bar stringers shall be $1\frac{3}{4}$ " x $\frac{3}{16}$ " thick, 1.08 lbs./ft aluminum or 3.16 lbs./ft steel.
- 2. Metal washers used on sign face shall have a minimum outside diameter of $^{15}/_{16}$ " \pm $^{17}/_{16}$ " and 10 gauge thickness.
- 3. No Parking Signs: All no parking signs with directional arrows shall be placed at a 30 to 45 degree angle with the line of traffic flow. No parking signs required at the above angles may have the support turned to the correct angle. If the no parking sign is placed with another sign that has to be placed at a 90 degree angle with the line of traffic flow, the detailed angle strap should be used to mount the no parking sign. Flat washers and lock washers shall be used with all nylon washers.
- 4. In lieu of using the bent bolt to attach the post to the stringer the contractor may choose to punch the sign backing and place the bolt through the sign, the stringer and the post.
- 5. 4" vertical clearance of anchor or breakaway base. The 4" x 60" measurement shall be made above and below post location and also back and ahead of post.

		or

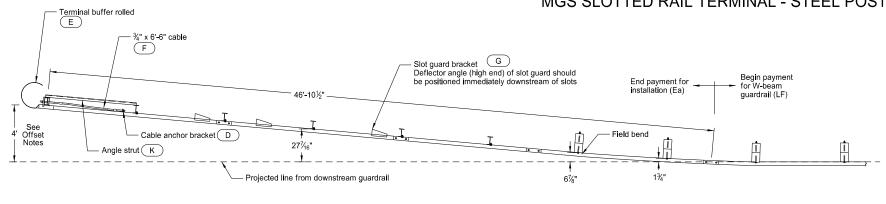

This document was originally issued and sealed by Roger Weigel, Registration Number PE-2930. on 7/14/17 and the original document is stored at the North Dakota Department of Transportation

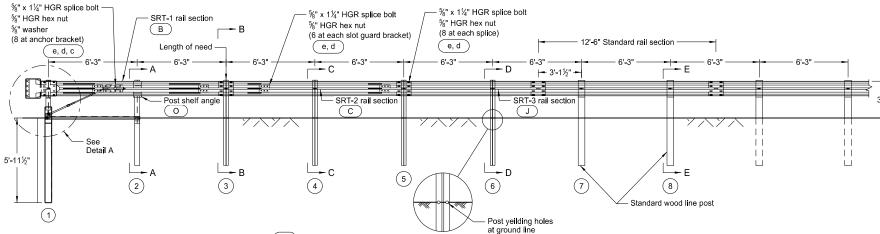

GENERAL NOTES:

(F)

- Wood posts are required with the Flared Energy Absorbing Terminal except posts 1 and 2.
- Galvanize all bolts, nuts, cable assemblies, cable anchors, and bearing plates.
- Flare the Flared Energy Absorbing Terminal when the approach guardrail is parallel with the roadway. When the approach quardrail is flared at 16:1 to 10:1, ensure the Flared Energy Absorbing Terminal has only the flare rate of the guardrail. When the guardrail flare is between 10:1 and 7:1, ensure the Flared Energy Absorbing Terminal is turned parallel to the roadway.
- Ensure the lower sections of the posts do not protrude more
- Install the lower section of the hinged posts without the
- "Toe nail" the wood blockouts to the rectangular wood

MGS SLOTTED RAIL TERMINAL - STEEL POST

%" HGR hex nut

M

DETAIL A

Post 1

(g, c, d)

SECTION A-A

Post 2

GENERAL NOTES:

- Galvanize all bolts, nuts, cable assemblies, cable anchors, bearing plates, slot guards, struts, nails, pipes soil tubes and soil plates.
- The breakaway cable assembly must be taut. A locking device (vice grips or channel lock pliers) should be used to prevent cable from twisting when tightening nuts.
- For curb installation, the curb must end prior to post 7.
 Where the curb is extended beyond post 7, the flared
 Slotted Rail Terminal can not be used. Use a straight
 end treatment at the end of the straight guardrail that is
 placed at the face of the curb.
- 4. For details not shown, see the manufacturer's
- The Slotted Rail Terminal is only to be used as an end terminal when a minimum length of 175 feet, including the length of the end terminal, can be provided in advance of fixed objects.

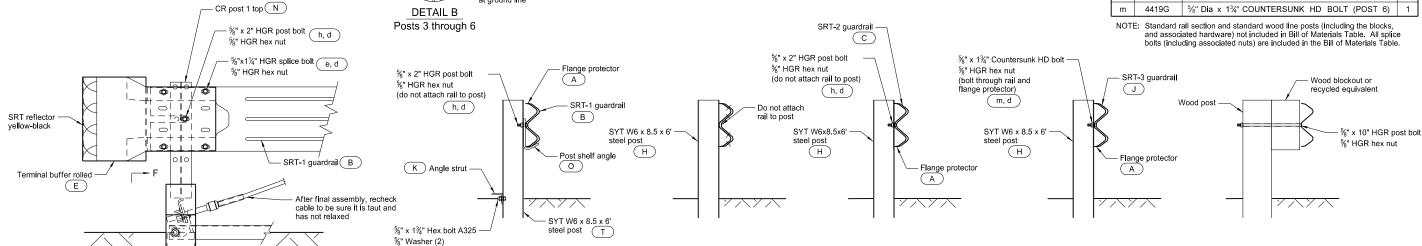

OFFSET NOTES:

SECTION C-C

Post 4

- Post offset dimensions are given to the center of the traffic face of posts, except at posts 7 and 8 where dimensions are to the center of the traffic face of the blockouts.
- Guardrail between posts 1-7 is on a straight line flare.
- Install the Slotted Rail Terminal with a 4' flare for either a straight or flared guardrail installation.

MASH SEQUENTIAL KINKING TERMINAL - WOOD POST

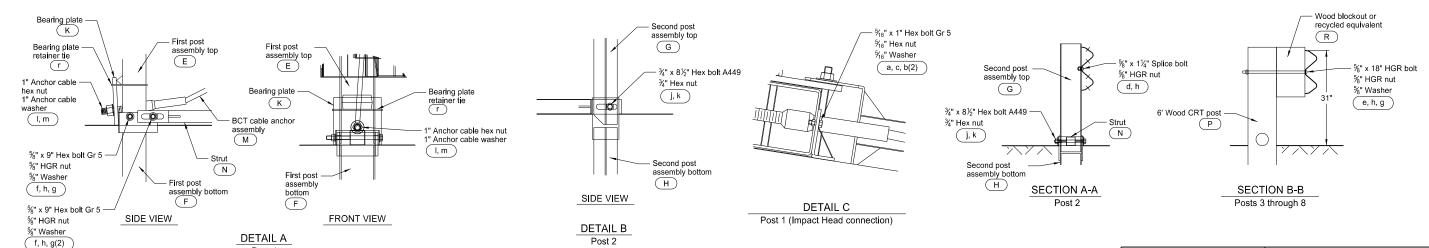

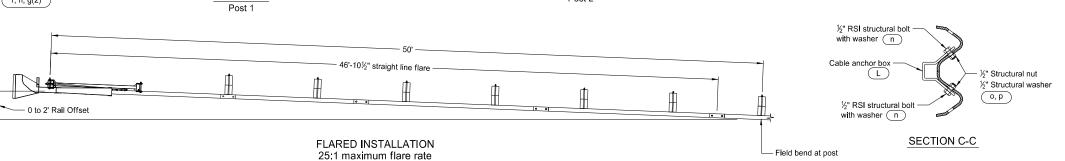

GENERAL NOTES:

- Galvanize all bolts, nuts, cable assemblies, cable anchors, and bearing plates.
- The MSKT can be flared at a rate of up to 25:1 to prevent the impact head from encroaching on the shoulder
- Ensure the lower sections of the posts do not protrude more than 4" above the ground (measured along a 5' cord). Site grading may be necessary to meet this requirement.
- Install the lower section of the hinged posts without the upper post attached. If the post is placed in a drilled hole, the backfill material must be compacted to prevent settlement.
- The breakaway cable assembly must be taut. Use a locking device (vice grips or channel lock pilers) to prevent the cable from twisting when tightening nuts.
- "Toe nail" the wood blockouts to the rectangular wood posts at post 3 through post 8. Use two 20 penny galvanized nails.

Post Mounted - Vehicular Post Mounted - Pedestrian (A)

Notes:

Reinforcing Plates:

Install reinforcing plates where mounting hardware attaches to signal heads when using polycarbonate signal heads. Where a plumbizer is used, place reinforcing plates on each side of the plumbizer.

Clearance: Place the bottom of post or pedestal mounted vehicular signal heads a minimum of 10 ft. and pedestrian signal heads a minimum of 8 ft. above

Signal Heads: See traffic signal layout for correct mounting position, numbers, size, and arrangement of lenses.

Pole Clamps: A pole plate with suitable banding material, as approved by the Engineer, is allowed in place of pole clamps. Where traffic signal heads and pedestrian signal heads are mounted one above the other, one pole clamp assembly is allowed.

Paint: Paint signal housing yellow and backplates dull black. Paint pole clamps and signal head mounting hardware the same color as the signal standard

When pedestrian heads are light standard mounted, paint the lower 12 ft. the same color as the other traffic signal standards.

Mounting

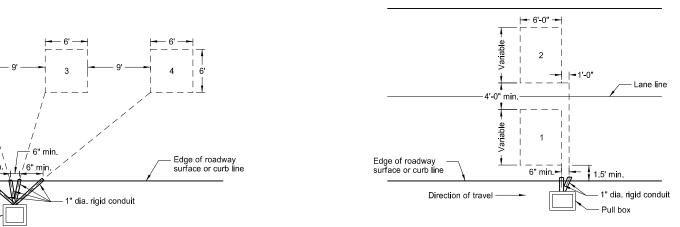

All signal heads shown viewed from direction of travel.

Signal Mounting Disconnect Hanger Assembly

- Place span wired mounted traffic signals in accordance with Standard Specifications Section 772 and 896.
- If a guy wire angle of less than 45° is used, increase the capability of the expanding soil anchor to resist tensions on site.
- Maintain the required 17 to 19 ft. signal height over the roadway for a minimum period of 90 calendar days after installation, unless written permission is granted by the Engineer to waive the 90 day requirement. Include all costs to maintain the signal head elevation in the price bid for span wire mounted signals.
- Operate traffic signal controller on 120 volts.
- Use thimble type connections for span wire and stability wire.

L1 Elevation Check Point Advancing Station R1 Elevation Check Point R2 Elevation Check Point R2 Elevation Check Point

GENERAL LAYOUT FOR SINGLE SPAN

GENERAL LAYOUT FOR MULTIPLE SPAN

BENCH MARK DETAIL

NOTES:

Elevation check points shall consist of $\frac{3}{6}$ " ø x 3" galvanized carriage bolts (or equal) set in the concrete barrier at the points indicated on the General Layout sketches. The top of the bolt head shall project above the finished concrete $\frac{1}{6}$ ". Elevation check points shall be placed on each barrier over each unit of the substructure for each bridge at a structural location.

Two bench marks as detailed hereon shall be set at diagonal opposite positions away from the structure location and at least 300 feet from the nearest point on the bridge or bridges (if more than one at a location). These bench marks shall be constructed as detailed on this sheet and located near the Highway Right of Way lines. The two pipes shall extend 4'-0" above ground and be painted with two coats of white paint suitable for galvanized steel surfaces.

The Project Engineer shall run a set of levels determining the elevation of each check point on the structure and the two bench marks immediately after the completion of the bridge. Bench Mark #1 can be listed as having elevation 1000 or the actual surveyed elevation. This information shall be recorded on SFN 13420 and submitted to the Bridge Engineer with adequate information locating each check point and bench mark.

All metal parts are to be hot dip galvanized after punching, shearing, welding and fabrication.

Threads of cap and pipe are not to be galvanized. At the time of installation these threads are to be coated with synthetic grease with teflon and cap screwed to a snug fit.

METHOD OF MEASUREMENT:

Each set of Bridge Bench Marks consisting of two bench marks and the required number of elevation check points shall be considered as one unit for bidding purposes and the quantity to be paid for shall be the number of sets of bridge bench marks which have been installed complete in place and accepted by the Engineer.

BASIS OF PAYMENT:

Bridge Bench Marks shall be paid for at the contract price bid for each set of Bridge Bench Marks, which price shall be full compensation for all excavation, backfill and clean-up, and for furnishing, hauling and placing all elevation check points, galvanized pipe, caps, rods, sand backfill, concrete, rock equipment, tools and incidentals, including galvanizing and greasing, necessary to complete this item.

GALVANIZING:

After fabrication the complete assembly shall be hot-dip galvanized.
