# Westbound lane of Expressway Bridge open to traffic

## One lane traffic is now open in each direction

The westbound traffic lane of Bismarck Expressway Bridge is now open to traffic, as construction crews were able to complete some lane work over the past weekend. The bridge is open to one lane traffic in each direction – eastbound and westbound. Travelers with wide loads are required to take a detour route to Memorial Bridge.

Work left to be completed on the project include:

- Cure time for the concrete overlay
- Installation of the expansion joints and driving surface
- Pedestrian railing and fence

After this work is completed Expressway Bridge will be open to four lanes of traffic in early November.

Rear-end crashes are the most common in work zones. Motorists are encouraged to allow extra distance between their vehicles and the vehicles in front of them, use extra caution, and obey posted signage.
