## **Rumble stripe project begins tomorrow on ND Hwy 23**

A rumble stripe project will begin Thursday, November 5, on ND Hwy 23 from the junction of ND Hwy 8 east to the junction of US Highway 83. The length of the project is approximately 48 miles. Both centerline and shoulder rumble stripes will be added to this section of the roadway. Rumble stripes are grooves cut into the roadway with the normal painted stripe over the top. They are constructed in an effort to improve safety on two-lane highways by causing a rumbling sound and vibration to alert drivers they are leaving the driving lane. Motorists are asked to use caution when traveling through the work zone.

### **During construction**

- Flaggers will be on site to control traffic
- Motorists can expect short delays

The project is expected to be finished by the middle of next week.
