

Design Memorandum No. 07-2003

TO: Engineering Offices and Divisions
Districts
Consulting Engineers

FROM: Mark S Gaydos, Design Engineer

DATE: May 23, 2003

Design Manual Reference:

Section III-03.02

____° Revision

_____ Supplemental

SUBJECT: CONTINUOUS MILLED RUMBLE STRIPS

Introduction

The memorandum provides additional guidance on Continuous Milled Rumble Strips.

Implementation

The use of this guidance is to be implemented immediately.

Guidance

On multi-lane divided and the Interstate system where shoulders are less than 4 feet in width rumble strips will be installed, by placing the rumble strips next to the edge of the driving lane. The design should include in the quantities a new edge line strip since the fog coat will probably cover some or most of the existing.

Standard D-960-2 will be revised to reflect the change in the location of the rumble strip.

Questions

Any questions regarding the content or implementation of the memorandum should be referred to Ron Henke, Design Division, 701-231-1078.
