Remarks: *Note:(1) Over cap between W. abutment & F beam 1 - 8 stringers with section loss to web. (1 ft) (2) Over cap between E. abutment & F beam 3 - 8 stringers with section loss to web. (1 ft) 1991 stringers were added where section loss has occurred. See deck sheet. NBI Remarks: Truss members very rusty. New deck in 2000. Embankment erosion around east wings. Utility cable hanging on north side of structure. Bridge div: changed alert code from 3 to 2 because the rusted beams were discounted when doing the load ratings. Height restriction signs of 13'-0" at each end. Channel Bank erosion around NE Wing. See Photo. Inspection incomplete due to High Water Under Structure. See Photo. 10/14/2019. Inspection completed 11/19/2019. Fracture Inspection Complete to Truss with no additional equipment used. Fracture Inspection to underside Truss Members not Completed due to High Water Under Structure. See Photo. 10/14/2019. Fracture Critical inspection completed to underside truss members with no additional equipment used. 11/19/2019. - 11/19/2019

Alert Code 1: Pack rust developing at L0 & L0' connection plates & B-B sections both ends. Severe rusting to lower portion of southeast can with some section loss at waterline. Pack Rust developing at connection plate L2 north side. Typical to all underside connection plates. - 11/19/2019

Alert Code 2: Very rusty stringers-some rusted thru the web. Additional I-beams added to panels 1 & 5 due to complete rusting thru of webs of adjacent stringers.(10 out of 21) Northeast can completely rusted thru near waterline with timber pile and concrete exposed, with approximately 70% section loss to the concrete @ the waterline. - 11/19/2019

Remarks: 11/3/2010 - Load Limit signs in place. Moderate to heavy rust on all steel. Floor beam number 2 is bent. U1 to L1 & L2, distorted. U5 to L4 & L5, distorted. Moderate section loss on SW column. Both outside deck planks on the west approach are sticking up. Concrete in the SW column is starting to rubblize. Moderate section loss SW Column. E abutment cap is distorted. 113 Linear feet of stringers are displaced with reduced load carrying capacity. No settlement evident. 3/12/2007 - Collision damage lateral cross brace east end gusset plate torn SE Corner. 9/4/2007 - Gusset plate on upper SE corner has been welded. Some section loss on steel casing SW column. Fasteners have been replaced on ends of lateral bracing. One missing on south end. 3 of the 17ft. deck planks have about 3/4" section loss. I talked to County Road Supt. Josh Logrein, they are going to have their engineering firm look at this bridge.

Alert Code 1: Lateral overhead bracing has collision damage. Some loose bolts on west abutment cap.*

Alert Code 3: Eleven stringers are out of alignment. One is no longer bearing on the floor beam. Eight of nine rivets are sheared off on top band of SW column.*80% section loss on top edge of SW Column. (This area supports the bearing plate for the SW corner of the truss system)

Remarks: NBI Remarks: County has diverted drainage from road ditch at ne and sw corners. Gabions have been installed at the base of the north and south abutment inslopes. Loose rock riprap has been placed on the abutment inslopes above the gabions. The gabions will have to be inspected during periods of high water to determine their stabilizing effect. Moderate erosion behind wingwalls at all 4 corners. Minor spalls on edges of beams at joints on driving surface. Hairline vertical cracks in jersey barriers. Random minor cracks and spalls in all endwall diaphragms and top of all wingwalls. 12/2010 - severe deterioration to downstream ends of north & south gabions. Severe loss of riprap on north abutment inslope. Severe erosion at west end of north abutment, 3' of one piling exposed. 12/2012 – Minor Hairline cracks in abutments. 11/2014 - Slope protection has been repaired and square concrete blanket has been placed on lower half of channel. Rip-rap has been placed on inslope, no pile are exposed. 11/2016: Slope protection is showing deterioration. NE corner shows more deterioration than other areas and may become damaged when water is flowing through the channel.
