Remarks: LOW WATER CROSSING WEST OF BRIDGE APPROX 50 FT. BRIDGE IS A FLATBED RAILROAD CAR FRAME SETTING ON LARGE SANDSTONE ABUTMENTS. BRIDGE HAS A NEW 3X12 WOOD DECK WITH 3X12 LONGITUDINAL WOOD RUNNERS. BRIDGE HAS A NEW 6X12 TIMBER RAIL. BRIDGE HAS 3X12 WOOD SPACERS BETWEEN THE DECK AND TOP OF GIRDERS AND BOLTED TO THE DECK ON THE OUTER ENDS. 6/3/19 - Abutment south side has slid out of place and bridge has settled 1' to 1-1/2' at SE corner. Debris under deck on the North and South sides. Spoke to landowner that lives near the bridge, he said a gravel truck did the damage, they use the bridge a lot when the low water crossing that is close to it is under water. Bridge is closed until they can repair it or replace it. Will call us when they have a fix in place and we will go inspect it again. - 6/3/2019 9.5.19 - County repaired this structure and sent in an inspection notification request to have us come back out and reinspect it before opening. They repaired and reset the abutment and added new 3x12 planks for beam seats and shims to level the structure, they also added in riprap. Can no longer view the abutments are they are covered entirely with the new riprap, as of the inspection the bridge no longer appears to be settling, but the corners still seemed to have slight distortion in them yet, the rails seem to be tilted outward. Recommend this structure gets a posting limit so it doesn't deteriorate from heavy loads anymore. Informed the county after the inspection that the NW corner could use either more riprap to fill in the hole that was left or to grade it better to fill in. Removed critical finding as the settling has been fixed. - 9.5.19 - 9/5/2019

Alert Code 2: 6/3/19 - Cracked masonry abutment that has settled. - 9/5/19 - moved from alert code 3, county has repaired settling but it is still cracked. - 9/5/2019
