Water has receded from ND Highway 14 north of Towner

The North Dakota Department of Transportation (NDDOT) is reporting that water has receded from the shoulder of the roadway on ND Highway 14, twelve miles north of Towner and traffic speeds have returned to normal.

The following highways are affected by flood waters, but remain open to traffic, with traffic speeds reduced:

- ND Highway 200, four miles west of Hurdsfield- Traffic reduced to one lane and motorists must stop and take turns
- US Highway 83, nine miles north of Max – Temporary grade raise in place with single lanes of traffic in both directions
- ND 53, near Benedict
- ND Highway 200, four miles east of Hurdsfield - Temporary Grade raise in place with a single lane of traffic

Fluctuating water levels make it difficult to predict when and where water will go over a roadway or recede from the roadway. The NDDOT encourages motorists to check road conditions before traveling due to rapidly changing conditions. For updated road information, call 511 from any type of phone or go to the Travel Information Map on our website at www.dot.nd.gov.

The road report is based upon the information available to the NDDOT at the time of preparation and is provided solely as a public service. Conditions may vary from those reported.
