Re-establish speed limit. Determine exact speed limit in the field, dependent on location and conditions.

If the tangent between tapers is less than 600', as an option, use sign W24-1-48 in place of double reverse curve signs.

Install flags on warning signs in urban areas when signs are not portable. Mount 24 inches square flags perpendicular to the edges of the sign, and at such a distance above the edge that the flag does not touch the sign when limp.

If the speed limit at the site is 45 mph or greater, or W x S Ô / 60 for urban, residential, and other streets with speeds of 40 mph or less, use sign W20-1-48.

L=Minimum length of taper, or S x W for freeways, expressways, and all other roads with speeds of 40 mph or less.
