IMAGINING THE GATEWAY TO MINOT

PROJECT DESCRIPTION AND GOALS

- ◆ The North Dakota Department of Transportation (NDDOT) and the City of Minot plan to replace the U.S. 83 Broadway Bridges.
- ◆ The current bridges carry approximately 30,000 vehicles per day. The two-lane southbound bridge was built in 1962 and the northbound bridge was added in 1971.
- ◆ The bridges are still safe, but are nearing the end of their design life and some early signs of deterioration were noticed during a recent inspection.
- ◆ NDDOT and the City of Minot are working on this project in cooperation with the Federal Highway Administration. A cost share between these organizations will pay for the new bridge. Construction costs are currently estimated between \$20 million and \$25 million.
- ◆ The goals for the project are to design a new bridge that:
 - ◆ Has open space underneath to create a “park like” area at the north end that the public can use and enjoy
 - ◆ Is compatible with floodwall and railroad requirements
 - ◆ Is aesthetically appealing

U.S. 83 Broadway Bridge Replacement Project

Minot, North Dakota

CONCEPT OF A NEW BROADWAY BRIDGE

This picture shows what the new Broadway Bridge could look like. This illustrates a more open look below the bridge. As more detailed engineering work is done, the look of the future bridge could change.

BRIDGE AESTHETICS

Aesthetics are being considered on the following bridge elements

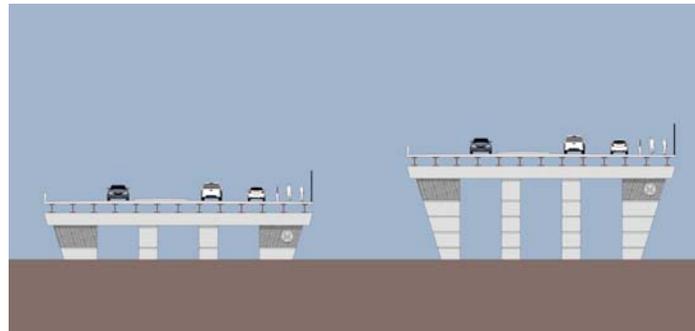

BRIDGE AESTHETICS

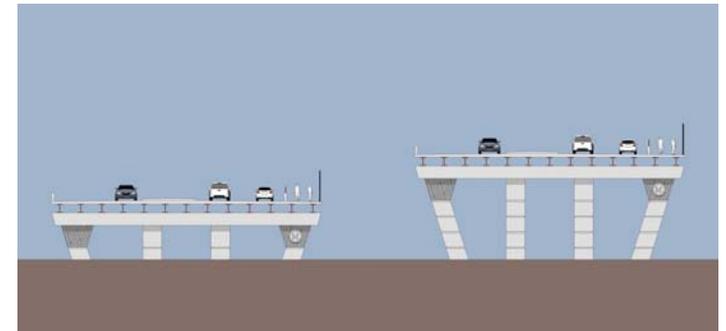

A number of aesthetic options are being considered for the new Broadway Bridge. Currently it is not known what aesthetic treatments will be included in the bridge's final design. We value your input. Please review these illustrations and use the comment card to let us know your priorities for aesthetics as well as what other suggestions you have for aesthetics on the bridge.
