

# **PUBLIC INPUT MEETING**

## **Menoken Interchange Bridge (I-94 Exit 170)**

### **Project: IM-1-094(236)170**

*Open House: April 11<sup>th</sup>, 2024 ~ 4:00 p.m. - 6:00 p.m. CDT  
Menoken Elementary School, Menoken ND*

### ***Project Location.....***

### ***Welcome.....***

Welcome and thank you for attending. Your input is appreciated. You are invited to make comments, ask questions, and express your views. Representatives from the NDDOT are available to answer your questions and discuss your concerns.

### ***Purpose of Meeting.....***

The purpose of this meeting is to provide an opportunity for people with either public or private interests to become fully acquainted with the proposed project and to offer feedback.

### ***Need for Project.....***

The Menoken Interchange is a key intersection for rural and agricultural traffic traveling along or crossing I-94. Recent inspections have identified deteriorating conditions that require attention on the Menoken Interchange overhead bridge that crosses I-94:

- Concrete spalling and cracking on the bridge deck, piers, and abutments.
- Delamination/fracturing occurring within the bridge deck near reinforcing steel (>25%).
- Impact damage to bridge beams.
- Cracking/separation on slope protection panels.

## *Need for Project Continued.....*

**High Load Impact Damage to Bridge Beams**

## *Proposed Improvements.....*

- Remove the existing 4-span bridge and reconstruct a new 32 ft. wide, 2-span bridge with improved design features.
- Re-grade and resurface north and south bridge approach roadways and install new guardrail.
- Re-grade and resurface portions of the interchange ramps and county/frontage roads to accommodate the new bridge.

## *Work Zone Traffic Control.....*

The overhead bridge that crosses I-94 at Exit 170 will be closed during construction. Eastbound and westbound interstate traffic will be maintained on I-94 through the construction zone; however, traffic will need to utilize the interchange ramps during intermittent periods of construction.

Northbound and southbound traffic that use the overhead bridge will first be detoured on I-94 to the nearest east (or west) interchange exit. Traffic will then return to Exit 170 on I-94 before continuing north or south. Traffic control devices will also be in place to maintain traffic while the interchange ramps and county/frontage roads are being reconstructed.

## *Comments – Your feedback is appreciated!*

Please submit your comments no later than April 25<sup>th</sup>, 2024. Written statements or comments about this project not submitted at the Public Input Meeting should be sent to:
